New isolated nucleic acid genes from Drosophila and interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of t specification or its complement. (I) is useful for: specification or the complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The

The inventuaseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     psoriasis; Rieger's syndrome; neurological disorder; erythropoiesis; neurodegenerative disorder; Waardenburg syndrome; Niemann-Pick disease; myeloddysplastic syndrome; myocardial infarction; hypertension; arthritis; anglogenesis; congenital heart disease; HDR syndrome; gene therapy; polyglutamine disorder; solid tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PNA; cytosine methylation state; SNP; retroviral infection; gene; single nucleotide polymorphism; adenosine deaminase deficiency; co

New nucleic acids or oligomers, useful for diagnosing or treat diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction,
                                                                                                                                                                                         2002-090046/12.
                                                                                                                                                            or cancer
                                                                                                                                                                            or treating
                                                                                                                                                                  solid

Claim 1; SEQ ID No 138; 32pp; English.

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from CC chemically pretreated DNA of genes associated with DNA transcription from CC one of 346 sequences, and an oligomer, in particular an oligomucleotide cC one peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for CC diagnosing or treating diseases associated with DNA transcription CC (particularly with the methylation status), e.g. adenosine decaminase deficiency, viral infection, retroviral infection, Sezary syndrome, consecutorial disorders, immunological disorders, werner syndrome, cuberculosis, developmental disorders, sporiasis, rieger's syndrome, concerulosis, developmental disorders, sporiasis, rieger's syndrome, myocardial confarction, hypertension, angiogenesis, erythropoiesis, congenital heart conficted genomic DNA molecules of the invention.

CC severome Datart Office of the invention. European Patent Office.

Sequence 11036 BP; 3112 A; 312 C; 2270 G; 5335 T; 7 other;

Also included are an oligomer (II) in particular an CS oligonucleotide or a peptide nucleic acid (PNA)-oligomer, comprising in CS each case at least one base sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated DNA of CS genes associated with pharmacogenomics and their complements, arranged in CS an array for analysing diseases associated with the methylation state (CDG) and/or detecting SNPs (single nucleotide polymorphisms) con the 87 sequences. The oligomers may also be used as PCR primers. CS and therapy of solid tumours and cancer. The present sequence con the 87 nucleic acids and their complements is useful for diagnosis and their printed specification, but was obtained in electronic format directly from MIPO at

CC state and/or single nucleotide polymorphisms (SNPs) in a chemically of treated DNA of genes associated with metabolism. An array of (I) is consecuted for ascertaining genetic and/or epigenetic parameters for the CC diagnosis and/or therapy of existing diseases or the predisposition to Specific diseases by analysing cytosine methylations. The method involves CC chemically treating genomic DNA sample by a solution of bisulphite, or disulphite such that cytosine bases which are cummethylated at the 5th-position are converted to uracil or another base which is dissimilar to cytosine in terms of hybridisation behaviour and CC amplifying fragments of the chemically pretreated genomic DNA is from cells or cellular components which contain DNA, courses of DNA comprising, for e.g. cell lines, blood, sputum, CC stool, urine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eye, intestine, kidney, brain, heart, prostate, lung, breast constantions, inversions and polymorphisms of genes associated with metabolism and sequences further required for their regulation. CC metabolism and sequences further required for their regulations and contain modifications of DNA bases of genes associated with contabolism. Further epigenetic parameters are in particular cytosine methylations of firstner which correlates with DNA bases of genes associated with contain the properties of their contained for the properties which correlates with DNA bases of genes associated with contained to the properties of the properties which correlates with DNA bases of genes associated with contained to the properties of the properties which correlates with DNA bases of genes associated with the properties which correlates with DNA bases of genes associated with the properties of the properties which correlates the DNA bases of genes associated with the properties of the properties which correlates the DNA bases of genes associated with the properties and the properties and the properties of the properties where the properties and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   least 18 bases of a segment of the chemically pretreated DNA of genes associated with metabolism such as DUSP2 (NM_004418), EPHX2 (NM_001979 ODER (NM_00320), SGSH (NM_000199), SHMT2 (NM_005412), SLC7A2 (NM_003046), SLC7A4 (NM_004173) and TYMS (NM_001071) (all undefined). (I) are useful for diagnosis and therapy of metabolic disease, solid tumours and cancers; as primer oligonucleotides for the amplification of DNA sequences, for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNDE) in a sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the sequence of the state and/or single nucleotide polymorphisms (SNDE) in a sequence of the sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-APR-2000;

The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by
                                                                                                                                                                                                                                                                                          Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; gene; antilnflammatory; infection; vaccine; meningitis; gene therapy; ds.
                                                                                                                                                                                                                              Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-OCT-2000; 2000GB-0026333.

                                                                                        with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled
                                                                                                                                                                                               The present sequence encodes a Staphylococcus aureus protein, that, based on homology with a E. coli protein, is believed to be a molybdate-binding periplasmic protein precursor. The present sequence was obtained from a library of clones of S. aureus WCUH 29 in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Staphylococcus aureus protein; ribozyme; antisense sequence; control; Staphylococcal gene; regulatory element; bacterial gene expression; vaccine; Staphylococcal infection; food poisoning; scaled skin syndrome;
                                                                                                                                The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be to produce vaccines to enable a host to produce specific antibodies
                                                                                                                                                                        The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes.
                                                                                                                                                                                                                                                                                                                                               P-PSDB;

                                                                                                                                                                                                                                                                                                          function, and represents a DNA Sequence of the invention. The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid sequences from Staphylococcus aureus WCHU29 useful in vaccines and for treatment of bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibody production; T-cell immune response; gastrointestinal infection; respiratory infection; inhibitor; bacterial infection; cardiac infection; central nervous system; kidney infection; urinary tract infection; antimicrobial compound identification; broad spectrum antibiotic;

Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode CC the cardiovascular system antigen polypeptides of the invention. CC Cardiovascular system antigen sand their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of CC chickens or sheep. A pathological condition can be determined by CC chickens or sheep. A pathological condition can be determined by CC detecting the presence or absence of a mutation in a cardiovascular CC system antigen polynucleotide. The treatable disorders include autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, creative disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, control of the disorders such as Alzhelmer's disease, infections caused by bacteria, viruses and fungi, coular disorders such as corneal confection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, cuparity. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before cransplantation, to regenerate tissues and in chemotaxis.

CC specification, but was obtained in electronic format directly from WIPO can be controlled to the printed of the printed of the controlled to the contr

The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such

The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA discloses genomic DNA sequences (ABL16176-ABL30511),

                                                                                                                                                                                                     The invention relates to an isolated DNA segment encoding the BpmI restriction endonuclease and isolated from Bacillus pumilus, New England Biolabs Collection No. 711. The isolated DNA is used for recombinant expression of BpmI, and is useful as a reagent for cleaving DNA, and for cloning or gene characterisation. The associated methylase, BpmIM1, can be used similarly. This polynucleotide sequence represents the DNA of the BpmI endonuclease gene (BpmIRM) of the invention.

CC cardiovascular system antigens and their associated polynucleotides are CC cardiovascular system antigens and their associated polynucleotides are CC useful in the diagnosis, treatment and prevention of various types of CC chickens or sheep. A pathological condition can be determined by CC detecting the presence or absence of a mutation in a cardiovascular cc system antigen polynucleotide. The treatable disorders include autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as cardiovascular disorders such as cardiovascular disorders such as cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as corneal cc cardiac arrest, cerebrovascular disorders such as corneal cc infection, endocrine disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal cc infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as gastrointestinal disorders such as Crohn's disease, renal disorders such as premature labour and infertility, cas plumerulonephritis and respiratory disorders such as asthma and cc pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before cransplantation, to regenerate tissues and inot formipart of the printed contractions, but was obtained in electronic format directly from WIPO as the printed of the

The nucleic acids (I) may be used to produce the containing them which are used to produce hosts cells which express the polypeptides (II) that produce hosts cells which express the polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA C. C. AAH55090 represent of the present invention. AAH53971 to AAH55090 represent of the present invention.

CC N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even consequences are given in the disclosure for SEQ ID NO:4465 to 4472, to sequences are present for SEQ ID NO:4465 to 4472.
                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Center project Information Center project name: L8810 Center clone name: 475_J_2
